EXAMPLES: a straight line indicates a constant speed

1. A cyclist is training for a race. Below is the graph of his distance from home compared to time. Describe what is happening at each labeled point of the graph.

| A: <br> sudden <br> increase <br> in speed. | B: <br> decrease <br> in <br> speed | increase <br> in speed | D: <br> turn around <br> and head <br> home |
| :--- | :--- | :--- | :--- |
| E: <br> slow down | F: <br> speed <br> up | G: <br> slow down | git back <br> home <br> home |

note from $A$ to $D$, the velocity is a positive value.
from $D$ to $H$ velocity is negative, going backwards.
2. Draw a graph to illustrate the following situation: Christine leaves her home and walks to her work. After checking the schedule, she jogs to the store and picks up some things for dinner. After shopping, Christine runs directly home. Use the following distances to help you draw your graph:
Home to work: 2 km ; Work to store: 4 km ; Store to home: 6 km
 assumption - all in a line indicates fastest speed.
3. The graph to the right shows how the number of cans in a vending machine varies during the day.
a) Describe how the number varies during the day, giving times, and numbers of cans in the machine.
at 8 cm sales are slow throughout the school day except at lunch
 and during the break when sates increase, It is restocked at mme tar $12: 30$.
b) When is the morning break, and when is lunch?
morning break $10 \mathrm{am}-10.30 \mathrm{am}_{\mathrm{m}}$
lunch 12:30-1:30 pm
c) What happens at 12:30 pm?
refilled at beginning of lunch
d) How many cans were sold?

$$
\begin{aligned}
& \text { many cans were sola? } \\
& 250 \rightarrow 100 \text {, sold } 150 \text { in morning } \\
& 400 \rightarrow 2500 \text { in afternoon sold } 150 \text { in }
\end{aligned}
$$

e) At what times are there 300 cans in the machine?
at $1: 30 \mathrm{pm}$ there were 300 cans and also at 12:30
f) How many cans are there at 10:30 am?

$$
150
$$

g) At what times are there 250 cans in the machine?
from $6-8$ am and at $12: 30$ and from 4 pm - the next morning
